

**Multifunctional actuators for butterfly valves**

- Torque 90 ... 3500 Nm
- Nominal voltage AC 230 V
- Control: modulating DC 0 ... 10 V
- Position feedback DC 0 ... 10 V
- 2 Auxiliary switches
- State at loss of signal: closed

### Safety notes

- The actuator has been designed for use in stationary heating, ventilation and air conditioning systems and is not allowed to be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- **Caution: Power supply voltage!**
- It may only be installed by suitably trained personnel. Any legal regulations or regulations issued by authorities must be observed during assembly.
- The device does not contain any parts that can be replaced or repaired by the user.
- The device contains electrical and electronic components and is not allowed to be disposed of as household refuse. All locally valid regulations and requirements must be observed.

### Product features

<b>Mode of operation</b>	The actuator is controlled with a standard modulating signal and travels to the position defined by the control signal. Measuring voltage U serves for the electrical display of the actuator position 0 ... 100% and as slave control signal for other actuators.
<b>Parameterisable actuators</b>	Input and output signals and other parameters can be altered with the BELIMO Service Tool, MFT-P.
<b>Simple direct mounting</b>	Simple direct mounting on the butterfly valve. The mounting position in relation to the butterfly valve can be selected in 90°-steps.
<b>Manual override</b>	The butterfly valve can be closed (turn clockwise) and opened (turn anticlockwise) with the handwheel. The handwheel does not move while the motor is running.
<b>Internal heating</b>	An internal heater prevents condensation buildup.
<b>High functional reliability</b>	Mechanical stops limit the actuator to -2° and 92°-steps. The internal limit switches interrupt the voltage supply to the motor. In addition, a motor thermostat provides overload protection because at 135°C it interrupts the voltage supply.
<b>Combination butterfly valve actuators</b>	Refer to the butterfly valve documentation for suitable butterfly valves, their permitted media temperatures and closing pressures.

## Settings

### Setting cam

The setting cams for limit and auxiliary switches can be accessed by removing the housing cover. Optionally, auxiliary switches LS4 / LS3 can be connected for signalling. Limit switches LS2 / LS1 interrupt the voltage to the motor and are controlled by setting cams TC.. The setting cams turn with the stem. The butterfly valve closes when the stem is turning clockwise (cw) and opens when the stem is turning counterclockwise (ccw).

#### Important!

Settings are only allowed to be made by authorised specialist personnel.

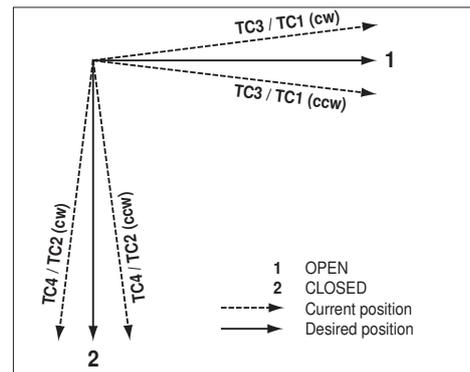

Settings of setting cams TC..

- TC4 for auxiliary switch position closed (factory setting  $3^\circ \leftarrow$ ).
- TC3 for auxiliary switch position open (factory setting  $87^\circ \leftarrow$ ).
- TC2 for limit switch closed (factory setting  $0^\circ \leftarrow$ ).
- TC1 for limit switch open (factory setting  $90^\circ \leftarrow$ ).

Adjusting setting cams

- 1 Use a 2.5 mm Allen key to unscrew the corresponding setting cams TC..
- 2 Turn the setting cam using the Allen key
- 3 Set as shown in the illustration below
- 4 Use the Allen key to tighten the corresponding setting cams

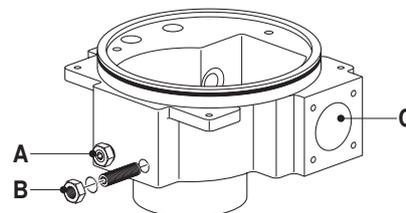

Adaption

An adaptation must take place after the TC1 and TC2 have been adjusted.

### Mechanical angle of rotation limitation

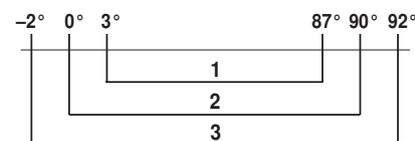

The mechanical angle of rotation is set at the factory to  $94^\circ \leftarrow$  and cannot be changed. The handwheel is rotated by means of a worm gear in a planetary gear unit. The gearing is stopped mechanically by means of two setscrews **A** and **B** ( $1\frac{1}{2}$  rotations of the setscrews correspond to  $2^\circ \leftarrow$ ).

Both limit switches LS 2 /LS 1 are set to  $90^\circ \leftarrow$  and must always switch off the motor before the mechanical angle of rotation limitation.

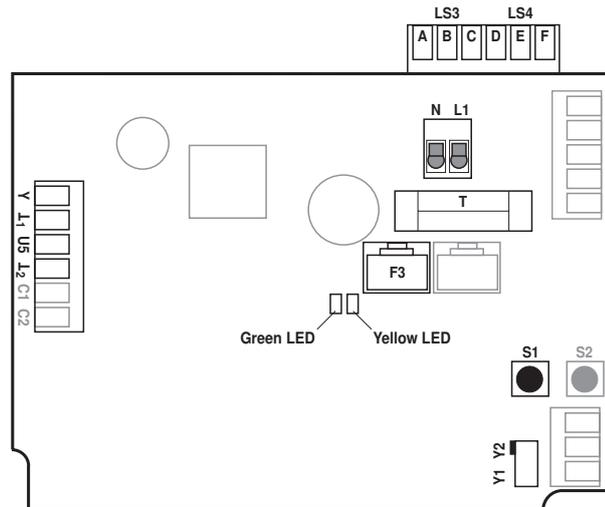

- A** Angle of rotation limiting OPEN ( $90^\circ \leftarrow$ )
- B** Angle of rotation limiting CLOSED ( $0^\circ \leftarrow$ )
- C** Connection of handwheel for angle of rotation limiting

### Relationship between mechanical angle of rotation limiting, limit and auxiliary switches

- 1 Auxiliary switch TC3 / TC4
- 2 Limit switch TC1 / TC2
- 3 Mechanical angle of rotation limitation (A + B)
